

Southern York County School District

One Warrior at a Time

Course/Subject: Geometry

Grade Level: 8

Textbook(s) / Instructional Materials Used: Geometry Connections, Volume 2, ISBN: 978-1-931287-59-3, Version 3.1 edition, June, 2006.

Month(s): August

Unit 1

Algebra Review and Transformation

| <u>Big Idea</u> | <u>Eligible Content/ Standards</u> | <u>Essential Questions & Lesson Essential Question</u> | <u>Objectives</u> | <u>Vocabulary</u> | <u>Competencies</u> |
|---|---|--|--|---|---|
| Students will understand: Interpreting linear equations. Concepts of transformations of shapes. | M08.B-E.2.1.3 Derive the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at b . M08.B-E.3.1.1 Write and identify linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers). M08.B-E.3.1.2 Solve linear equations that have rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms. | How can I generate the equation of a line from a graph? How do I determine how many solutions there are to a linear equation? How do I solve linear equations? How do I determine the best method to solve a system of equations? What does the solution to the system of equations represent? What sequence of transformations were used to move a figure? | Students will know: How to recognize how algebra can be used in the study of geometry. Students will be able to: Flip, turn, and slide shapes, while learning about transformations and how to use these motions to build new shapes and describe symmetry. | Slope Linear Equations Variables Y-intercept Solutions Coefficients Systems of Equations Elimination Method Substitution Rotations Reflections Translations Transformations | Determine equation of a line from a graph. Graph a line from an equation. Solve a system of equation in 2 variables. Use rigid transformations to move figures on a graph. |

| | | | | | |
|--|---|--|--|--|--|
| | <p>M08.B-E.3.1.3 Interpret solutions to a system of two linear equations in two variables as points of intersection of their graphs because points of intersection satisfy both equations simultaneously.</p> <p>M08.B-E.3.1.4 Solve systems of two linear equations in two variables algebraically and estimate solutions by graphing the equations. Solve simple cases by inspection.</p> <p>M08.B-E.3.1.5 Solve real-world and mathematical problems leading to two linear equations in two variables.</p> <p>M08.C-G.1.1.1 Identify and apply properties of rotations, reflections, and translations.</p> <p>M08.C-G.1.1.2 Given two congruent figures, describe a sequence of transformations that exhibits the congruence between them.</p> | | | | |

|--------------------------|---------------|

Similar Figures

| <u>Big Idea</u> | <u>Eligible Content/Standards</u> | <u>Essential Questions & Lesson Essential Question</u> | <u>Objectives</u> | <u>Vocabulary</u> | <u>Competencies</u> |
|---------------------------|--|--|--------------------------|---|---------------------------------------|
| Students will understand: | G.1.3.1.1 Identify and/or use properties of congruent and similar polygons or solids. | How do you dilate a figure on the coordinate plane? | Students will know . . . | Similar Figures Proportional Relationships Included Angle | Determine if 2 triangles are similar. |

| | | | | | |
|---|--|---|---|---|---|
| <p>How to explore ways to determine if two figures are similar</p> <p>How to develop ways to use the information about one figure to learn more about another that has the same shape</p> | <p>G.1.3.1.2 Identify and/or use proportional relationships in similar figures.</p> <p>G.2.2.3.1 Describe how a change in the linear dimension of a figure affects its perimeter, circumference, and area (e.g., How does changing the length of the radius of a circle affect the circumference of the circle?)</p> <p>M08.A-N.1.1.1 Determine whether a number is rational or irrational. For rational numbers, show that the decimal expansion terminates or repeats (limit repeating decimals to thousandths).</p> <p>M08.A-N.1.1.2 Convert a terminating or repeating decimal to a rational number (limit repeating decimals to thousandths).</p> <p>M08.A-N.1.1.3 Estimate the value of irrational numbers without a calculator (limit whole number radicand to less than 144). Example: $\sqrt{5}$ is between 2 and 3 but closer to 2.</p> <p>M08.A-N.1.1.4 Use rational approximations of irrational numbers to compare and order irrational numbers.</p> | <p>How can you determine if 2 triangles are similar?</p> <p>How can you find missing sides of similar figures?</p> <p>How do I determine if a number is rational?</p> <p>How do I convert a rational decimal to a fraction?</p> | <p>How to support a mathematical statement using flowcharts and conditional statements</p> <p>About the special relationships between shapes that are similar or congruent</p> <p>How to determine if triangles are similar or congruent</p> <p>Students will be able to:</p> <p>Through exploration generate similar figures</p> <p>Determine what common qualities similar shapes have</p> <p>Discover the conditions that cause triangles to be similar or congruent</p> | <p>Included Side Corresponding Parts SAS AA SSS Perimeter Area Dilation Rational Numbers Irrational Numbers Repeating Decimals Flow Chart</p> | <p>Find the missing side of a figure using scale.</p> <p>Determine if a number is rational or irrational.</p> <p>Use flowcharts to organize information providing support for proofs.</p> |
|---|--|---|---|---|---|

| | | | | | |
|--|---|--|--|--|--|
| | <p>M08.A-N.1.1.5 Locate/identify rational and irrational numbers at their approximate locations on a number line.</p> <p>M08.B-E.2.1.1 Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. Example: Compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed.</p> <p>M08.B-E.2.1.2 Use similar right triangles to show and explain why the slope m is the same between any two distinct points on a non-vertical line in the coordinate plane.</p> <p>M08.C-G.1.1.3 Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.</p> <p>M08.C-G.1.1.4 Given two similar two-dimensional figures, describe a sequence of transformations that exhibits the similarity between them.</p> | | <p>Use a flowchart to organize facts and support their conclusions</p> | | |
|--|---|--|--|--|--|
